

OFFICIAL VERICOIN ROADMAP

This VeriCoin Roadmap illustrates the projects that are currently being worked on by the VRC developers and can be used to track the progress of each project. Brief project descriptions are provided by the developers to give the VeriCoin community a better understanding of where the coin is headed.

You can influence the development of new features by voting here:

[Community Feature Request Poll](#)

**Features implemented via the Community are designated as "CFR" - Community Feature Request.*

Current Projects & Planned Features

Completed Projects & Features

Proof-of-Stake-Time Protocol	100%
(PoST) White Paper	100%

Wallet Auto-Update	100%
Option to Hide Decimals (CFR)	100%
News Ticker in Wallet (CFR)	100%
Official Forums	100%
New Wallet UI	100%
New Vericoin Website	100%
Android Wallet	100%
VeriBit	100%
VeriSend	100%
VeriSMS	100%

Project Descriptions

- **Password Login Screen for Encrypted Wallets** - Users who encrypt and stake their wallets are now required to enter their password as a security precaution. This was a [Community Feature Request](#).
- **Two-Factor Authentication (2FA)** - A much more secure method of unlocking the wallet, likely requiring a local wallet password combined with a pin/code sent to a secondary device, such as a smartphone. This is a [Community Feature Request](#).
- **News Ticker in Wallet** - A scrolling ticker in the wallet that displays the latest official VeriCoin news to notify users about upcoming features, pending updates, or problems. This was a [Community Feature Request](#).
- **Option to Hide Decimals** - Options toggle in the wallet to disable or enable the display of decimals in the VRC amounts. This was a [Community Feature Request](#).
- **Proof-of-Stake-Time** - The next generation of the Proof-of-Stake protocol. This enhanced PoS method (**PoST**) will make stake distribution more fair and increase overall network security.

- **Wallet Auto-Update** - A feature that allows the wallet to notify the user when a new version is available and optionally download and install that new version.
- **Turbo Bootstrap** - A method of downloading / synchronizing the blockchain that can reduce the time from several hours to just a few minutes.
- **Username & Anon Whitepaper** - A technical whitepaper providing details on the upcoming Decentralized Anon and Decentralized Username features.
- **Improved Fiat Purchasing In Wallet** - A customized and more accessible VRC/FIAT portal for purchasing VeriCoin through the wallet.
- **Decentralized Exchange** - Decentralized exchange software built with the best team in coin multisig technology.
- **Decentralized Usernames** - A private and decentralized username implementation for ease of use, without the loss of security.
- **Decentralized Anon** - A new, fully decentralized, privacy technology based on stealth addresses.
- **SuperNET Integrated Wallet** - A wallet upgrade that includes full SuperNET access as well as numerous other enhancements and improvements (including a decentralized exchange)
- **VeriBit 2.0 aka SuperBIT** - One of VeriCoin's core contributions to the SuperNET will be a completely DeCentralized version of VeriBit which will "attach" the ability to spend ANY coin within SuperNET wherever Bitcoin is accepted.
- **New Wallet UI** - Simple, clean lines, consistent branding and user friendly interface.
- **New VeriCoin Website** - A new, sleek, easy to navigate site crafted by a professional designer.
- **Android Wallet** - An Android version of the VeriCoin wallet which includes VeriBit and a QR code reader.
- **VeriBit** - Pay for anything with VeriCoin anywhere that Bitcoin is accepted, right from the VeriCoin wallet!
- **VeriSend** - An optional coin mixing service for full transaction privacy in the wallet.
- **VeriSMS** - A service that allows VeriCoin to be sent to/from nearly any cell phone in the world using SMS (text messaging).
